

IPTrunking™

A PBX Integration/PRI Replacement Service.

The Top Line. Here is a versatile and cost-effective solution delivering the benefits of VoIP along with Business Continuity solutions while retaining your existing PBX/Key system and Internet connection for both voice and data.

tNet *Business VoIP*

IPTrunking: Now You Can Make Your Move—And Do It On Your Own Schedule.

If you run a business, particularly a small or medium-sized business (SMB), you are probably weighing how you can economically and easily migrate to the benefits of a VoIP solution while not immediately abandoning the investment you have made in your existing PBX/Key system and handsets.

IPTrunking from Tidal Communications is the solution that will allow you to make that move by giving you the ability to:

- purchase a limited number of lines to match your communications costs to your actual business needs
- consolidate your data and voice bills to lower expensive phone bills due to long distance calls and the taxes that go with them
- leverage your existing Internet connection for both data and voice
- streamline your communications platform and enjoy immediate and significant economic advantages
- provide new generation network to enhance your mobility via the tNet *Business VOIP* network

How IPTrunking Smooths The Transition.

Making your move to VoIP is not as challenging a proposition as you might think. Look at a typical “before” scenario. As depicted in Illustration A, voice and data reside on separate networks within the infrastructure, with separate cost centers and, usually, separate support staffs as well. However, with IPTrunking implemented at your PBX site, all of that changes by leveraging your data connection to simultaneously serve both your data and voice needs.

Illustration A

As shown in Illustration B, we show you how you can leverage your existing data connection by utilizing a certified Integrated Access Device (IAD) which is simply installed at your premises, and connects to our proprietary network via our IPDirect™ service or via a broadband connection like cable or the Internet. This configuration provides the necessary amount of trunks (DSO) access to DIDs nationwide—and can also lower your long distance bills and other related fees and taxes.
